

Welding machine is what is caused by arc of the high temperature using positron polarization in an instant short-circuit to melt the solder of electrode for arc welding. It can achieve their integration.

Our welding machine use IGBT modules and inverter. It is high efficiency and easy to use. Our series of welding machines include DC stick welder, DC TIG welder with MMA, DC pulse TIG welder, AC/DC TIG welder W/I MMA, CO2/MIG/MAG welding machine, pulse CO2/MIG/MAG welding machine, submerged arc welding machine. Besides above, there are series of FNBC, FR ,and so on. They are higher performance welding and long-lived.They have mostly gotten CE± CERTIFICATE.
